Problem Statement

- In such turbulent times, a credit agency reached out to you explore trends in the market and try to identify factors that contribute to people not paying their bills and falling into debt.
- They would also want at least **a year's worth of forecasting of future** rates and debt levels to plan their marketing and strategy.
- Finally, the company would like to know cyclical trends that affect credit and how they can be leveraged to the company's advantage.

Audience

**Bank specialising
in consumer credit**
e.g. credit cards

Data Collection

- 1** Bureau of Labor Statistics
- 2** Bureau of Economic Analysis
- 3** FRED - St Louis FED
- 4** NYFED
- 5** Fed Reserve Board

Economic Context

Exploratory Analysis

Credit Growth:

- Sensitive to inflation across: food, energy & shelter
- Heavily negatively correlated to unemployment
- Generally pro-cyclical:
 - tends to improve when the economy is performing well
- Averages 5-6% per annum, around 1-2% ahead of nominal GDP

Steve

Credit Quality (30/90 day delinquencies):

- Tends to deteriorate as credit grows, usually with a lag
- The post COVID period particularly difficult due to:
 - Years of low/zero rates and available, cheap credit.
 - Increase in inflation
 - Debt service costs pressuring consumers

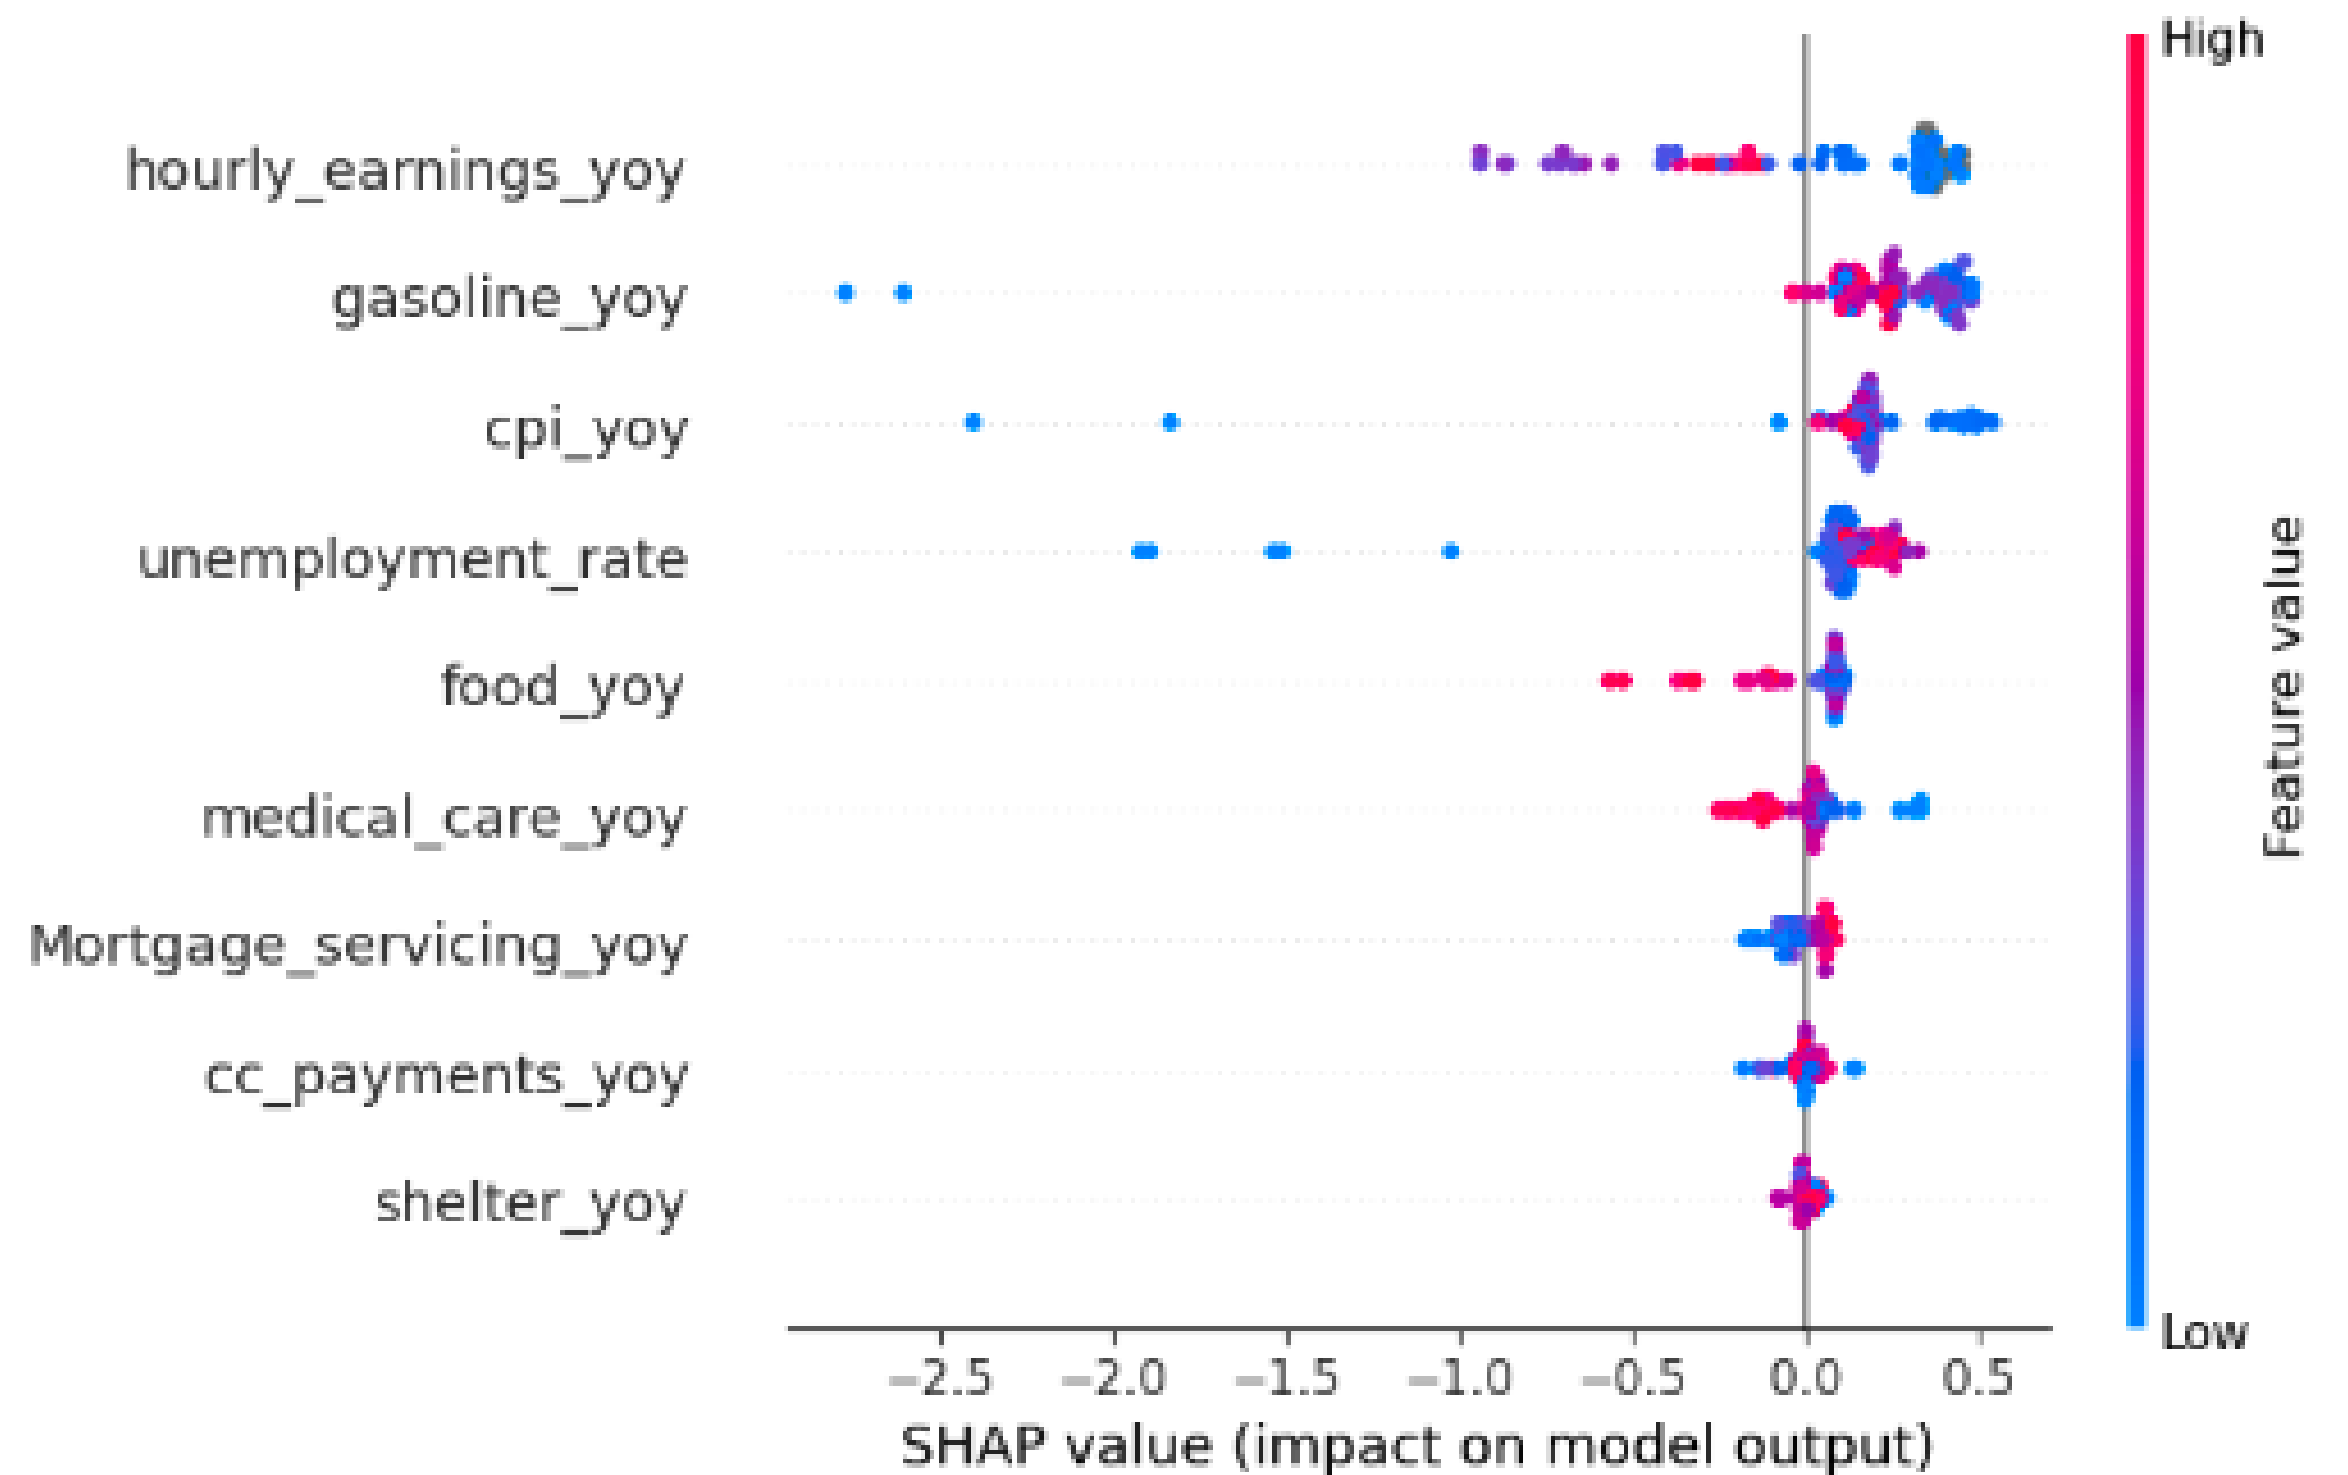

Percentage of outstanding credit card debt 30 days and 90 days late

Credit Quality:

SHAP values for credit delinquency

Growth in credit card servicing costs a significant driver of credit delinquency

GDP 4 month
lagging indicator
of Credit Growth
(62% correlation)

Dips and
recoveries
2008 and 2020

Credit Growth, CPI & GDP YoY

Stay-at-home orders

March 2020

1st Covid relief package (CARES act)

April 2020

US COVID DATES

2nd Covid relief package

Jan 2021

3rd Covid relief package (ARP)

March 2021

Summer 2021 - with vaccination rates increasing lockdowns are lifted

Aaran

f^{-1}

Negative 31% correlation between savings as % of disposable income and Credit Growth

Credit Growth and Savings as % of Disposable Income

States with Highest & Lowest Delinquency

GDP 4 month
lagging indicator
of Credit Growth
(62% correlation)

Dips and
recoveries 2008
and 2020

Delinquency rates (% of people that do not pay their monthly bills) was one of our target variables.

Car purchases showed significant correlation with delinquencies **and** FedFunds rate (base interest rate)

Modeling Delinquency

Further Modeling

Regression
Random Forests

Steve

Using SVR, 0.8 cross-validation score predicting 12 month forward credit growth and delinquency credit levels.

The models forecast growth and delinquency to moderate from currently high levels into 2024

Actual vs 12m ahead predicted yoy credit growth, 12m ahead, using SVR model

Actual vs 12m ahead predicted 30 day delinquencies using SVR model

Recommendations

Credit Growth

Over next 12 months

Delinquencies

Over next 12 months

Rarely see

increasing credit
growth without rise in
delinquencies

A black circle with a line extending from its right side, curving downwards and to the right.

Be selective

and conservative with
new lending

Restrict lending

to new/ lower quality
borrowers -> focused on
existing, low risk
borrowers

Increase rates

to offset higher
delinquencies

Thank you
